

WARNING

The code book was created for entertainment. The design of the code word list was deliberately made insecure. On the surface, it certainly looks secure and if it's origins and design were unknown it would undoubtedly take slightly longer to break. At the end of the day, week or months, repeated use would eventually lead to breaks.

Mathematically the key space of the PRNG is small enough for brute force reconstruction of the key using a budget home computer. Literally, the key space is the modulus used for the Linear Congruential Generator or 139968 (0 to 139967). Total storage space required to create every possible key is about 2.38Tb. You could use a different PRNG or even a secure stream cipher such as RC4, but it would still fall to cryptanalysis. Mechanically, this is little more than a Caesar Cipher using words instead of letters and can eventually be broken using similar cryptanalysis tools.

English Word List

actor;	QICOH	blood;	TUCOL
adjective;	CIZEX	blue;	COLUT
adult;	SUQOY	boat;	DOJIG
afternoon;	YUPAB	body;	TUYAS
air;	ZOJUK	bone;	YESUB
airport;	BECAS	book;	WOXIN
